Summary

Full-Stack Developer with hands-on experience in web development, backend systems, cloud deployment, and CI/CD automation. Passionate about building scalable applications and reliable infrastructure.

Technical Skills

Languages: JavaScript, TypeScript
Frontend: React.js, Next.js, Tailwind CSS, Redux, Shadcn/ui
Backend: Node.js, Express.js, REST APIs, Authentication & Authorization
Databases: MongoDB, PostgreSQL, Redis
Cloud & DevOps: AWS, GitHub Actions, Custom CI/CD, Linux, Nginx
Deployment & Tools: Git, GitHub, Cloudflare, Vercel, Netlify, Render

Work Experience

Freelancing Jan 2026 - APR 2026

Frontend Developer

- Developed 3+ responsive web applications using Next.js and React, improving UI performance and user experience.
- Integrated REST APIs and authentication systems, handling dynamic data and real-world application logic.
- Built reusable and scalable component structures, reducing development time by 25–30%.

Meta Scifor Technologies Oct 2025 - Jan 2026

Frontend Developer Internship

- Built 10+ reusable UI components for an LMS platform using React and Next.js.
- Improved usability by applying clean architecture and modern UI/UX practices.
- Collaborated on real-world features and contributed to frontend performance optimization.

Projects

Cloud Storage App – Full-Stack Project

Technologies: React.js, Node.js, Express.js, MongoDB, AWS, Razorpay, GitHub Actions, Nginx

- Built a cloud storage platform featuring file uploads, document management, and subscription-based storage plans.
- Implemented custom authentication with Google Sign-In, handling user identity verification and secure session management without relying on third-party authentication frameworks.
- Integrated AWS S3 for frontend hosting and user file storage, with Razorpay for subscription payments and storage quota management.
- Deployed the backend on AWS EC2, using Nginx as a reverse proxy and PM2 for process management.
- Configured Cloudflare for custom domain management and application delivery.
- Automated frontend and backend deployments using GitHub Actions CI/CD workflows.
- Integrated Google Maps with markers, routes, and place autocomplete for location selection and visualization.

Tripping – Trip Planning App (Client Project)

Technologies: Next.js, TypeScript, Tailwind CSS, Shadcn/ui, Firebase, Google Map Api

- Built a complete trip planning system where users can create trips, add activities, and manage daily timelines.
- Implemented complex drag-and-drop logic to move activities between timeline and panel with proper time adjustment
- Handled real-time updates and state sync while managing activities, transport, and schedule changes.
- Integrated APIs for trip, plan, activity, and transport management, including create, update, and delete operations.
- Built transport flow between activities, handling distance, sequence, and proper placement in timeline.
- Integrated Google Maps with markers, routes, and place autocomplete for location selection and visualization.
